

# SYED ASJAD ABBAS

AI & Full-Stack Engineer | ML · NLP · FastAPI · React.js

 [asjadabbaszaidi@gmail.com](mailto:asjadabbaszaidi@gmail.com) |  +92 303 3236878 |  [LinkedIn](#) |  [GitHub](#) |  Portfolio |  Lahore, Pakistan

## SUMMARY

Computer Science student at COMSATS University Islamabad specializing in AI systems, backend engineering, and full-stack development. Experienced in building and shipping production-grade applications — from NLP-powered evaluation pipelines to e-commerce platforms — with a focus on clean architecture, API design, and real-world deployability. Comfortable across the stack: FastAPI/Python on the backend, React.js on the frontend, and MongoDB/MySQL for data. Currently building MockAI as an FYP and previously contributed to a music streaming platform at Svype. Seeking backend/AI engineering roles at product-focused startups or tech companies.

## TECHNICAL SKILLS

- Programming Languages: Python, JavaScript, Java, C#, SQL
- Artificial Intelligence: Machine Learning, NLP, Deep Learning, BERT, DeepFace, OpenCV, scikit-learn, Pandas, NumPy
- Frontend Development: React.js, Flutter, Tailwind CSS, HTML5, CSS3, Responsive UI Design
- Backend Development: FastAPI, REST API Design, JWT Authentication, API Integration
- Databases & Cloud: MongoDB Atlas, MySQL, Firebase, Vercel, Firebase Hosting
- Tools & Platforms: Git, GitHub, VS Code, Postman, Jupyter Notebook, Linux, Docker (basic)
- Core Concepts: OOP, Data Structures & Algorithms, Software Architecture, SDLC

## EXPERIENCE

### [Zeploy Tech](#) | Founder & Full-Stack Developer | April 2026 – Present

- Founded Zeploy Tech to build and ship software products for real clients; handled full product lifecycle from architecture design through deployment and maintenance.
- Rapidly scoped, built, and delivered two client-facing products within the first two months - managing all development solo. Clients include local retail and fitness businesses.
- Built EduCart, a full-stack e-commerce platform with JWT-based auth, role-based access, MySQL database, and a React.js frontend; optimized page load performance through query optimization, lazy loading, and database indexing.
- Developed a Gym Management System handling member enrollment, automated attendance tracking, and subscription billing — deployed and actively used by the client with 100+ member records.
- Refactored database query logic and API response handling across both products, cutting average API response times and eliminating redundant DB calls through indexing and caching strategies.
- Managed end-to-end delivery: requirements gathering, system design, iterative development, QA testing, and deployment — shipping both products within planned timelines.

### Freelance Backend & Full-Stack Developer | Remote | 2024 – Present

- Developed and maintained backend systems and full-stack web applications for local businesses and startup-oriented projects using FastAPI, React.js, MySQL, and JWT authentication.
- Built scalable APIs, optimized database queries, and improved deployment workflows focused on maintainability and production-ready performance.
- Collaborated with clients on feature planning, debugging, deployment, and iterative product improvements across e-commerce and business management platforms.

## Svype | Software Development Intern | September 2025 – April 2026

- Contributed to TuneBox, a Flutter-based music streaming mobile app at Svype; built and maintained UI screens, integrated REST APIs for playback and user data, and managed state using Flutter's provider pattern.
- Resolved frontend rendering bugs and improved state management patterns, reducing UI inconsistencies across playback and playlist modules in a team of 5 developers.
- Built a reusable component library for audio controls and playlist management, reducing the codebase from ~1,200 to ~720 lines of UI logic and cutting time-to-ship for new playlist features.
- Collaborated on API contract design and integration testing using Postman, ensuring consistent data flow between frontend and backend services.

## PROJECTS

- **MockAI | AI-Powered Interview Evaluation System (FYP)**  
Built with React.js, FastAPI, Python, and MongoDB Atlas. Integrates BERT for answer quality scoring, DeepFace/CNN for real-time facial emotion detection, and speech-to-text for automated response analysis. Generates structured feedback reports covering confidence, coherence, and domain knowledge. Currently under active development as Final Year Project-targeting completion Q4 2026.
- **EduCart | E-Commerce Platform** | [educart.vercel.app](https://educart.vercel.app)  
Full-stack e-commerce platform built with React.js, FastAPI, MySQL, and JWT authentication. Features role-based access, product catalogue management, and cart/checkout flow — deployed on Vercel.
- **TuneBox | Music Streaming Platform**  
Flutter-based music streaming platform built at Svype. Developed reusable component library for audio controls and playlist management; integrated REST APIs for playback and user data.
- **Gym Management System**  
Full-stack operations platform for a fitness client with member enrollment, automated attendance tracking, and subscription billing. Built with FastAPI and MySQL; actively used with 100+ member records.

## EDUCATION

### COMSATS University Islamabad, Lahore Campus

Bachelor of Science in Computer Science

2023 – 2027

Relevant coursework: Machine Learning, Computer Vision, Natural Language Processing, Database Systems

## CERTIFICATIONS

- Google AI Essentials | Google & Coursera | 2026
- Deep Learning Specialization | DeepLearning.AI & Coursera | 2026

## ACHIEVEMENTS

- Delivered two client-facing applications end-to-end as a solo developer — EduCart and a Gym Management System — both live and actively used, with no team or external funding.
- Building MockAI as FYP: a multi-modal AI system combining BERT-based NLP, DeepFace emotion detection, and speech-to-text in a single evaluation pipeline — one of the more technically complex student projects in the CS department.
- Balanced three major technical commitments across 2025–2026: software internship at Svype, FYP development (MockAI), and founding and running Zeploy Tech.
